Figure 1: The Modified Delphi procedure used for creating consensus

**First Meetings of Expert Panel (14 Participants)**
Presentation on previous findings and literature, and panel asked to make recommendations of guidelines for an intervention, recommendations for implementation, and recommendations of information sources to aid future intervention creation.

- **Intervention Recommendations (N= 16)**
- **Implementation Recommendations (N =12)**
- **Information Sources (N= 20)**

**First Survey of Expert Panel (16 Participants)**
List of items generated from first meetings presented to all members, asked to list any other items believed to be important to intervention creation.

- **Intervention Recommendations (N= 20)**
- **Implementation Recommendations (N =19)**
- **Information Sources (N= 20)**

**Second Survey of Expert Panel (14 Participants)**
Intervention and implementation recommendations presented to all members, asked to rate how strongly they agree to inclusion in final document (Strongly Agree, Agree, Disagree, Strongly Disagree).

**Second Meeting of Expert Panel (10 Participants)**
All items still considered important for inclusion in intervention. Results of survey discussed in terms of intervention development, potential for use in general practice and any ambiguities in wording. Conducted by phone-conference.

- **Intervention Items (n = 22)**
  - Prevention / Health Promotion / Access
  - Assessment and Identification
  - Treatment
  - Interaction with Other Agencies / Referral
  - Ongoing Support

- **Implementation Issues (n=19)**
  - Training
  - Consultation Improvements
  - Service-Level Changes
  - Collaboration
  - Healthcare-system Changes

**Items reach consensus**
